

We've Moved !

We are happy to have relocated to 1812 Country Club Road. Please check the website for directions to our new location.

New Obagi Eyelash Product - ELASTILash™ Eyelash Solution

Designed to achieve the appearance of thicker, fuller lashes, the key ingredient is Myristoyl Pentapeptide-17. In clinical studies 7 out of 10 patients reported the appearance of thicker, fuller lashes in as little as 6 weeks. This product will hopefully reduce the frustrations with Latisse of needing to change the brush after each application. The product will contain a 2-3 month supply and will retail at around \$60. We are excited to see how this new product stacks up to Latisse. We will keep you posted. We will likely have the product in the office in a few weeks.

Latisse Users - \$20 Rebate Available

Restylane®
FAMILY OF INJECTABLE GELS

The Restylane family of products includes Restylane, Restylane-L, Perlane, and Perlane-L. These products can be used individually to add volume and fullness to the skin to correct moderate to severe facial wrinkles and folds, such as the lines from your nose to the corners of your mouth (nasolabial folds). Ask your healthcare professional which is right for you.

Important Safety Considerations for the Restylane family of products

Products in the Restylane family should not be used by people with previous bad allergies, particularly to certain microorganisms known as gram-positive bacteria, or by people with previous bad allergies to drugs that have required in-hospital treatment. These products should not be used by people with bleeding disorders. Injections should not be made anywhere except the skin or just under the skin. Restylane-L and Perlane-L should not be used by people with a known allergy to lidocaine.

Use of products in the Restylane family at the site of skin sores, pimples, rashes, hives, cysts, or infection should be postponed until healing is complete. Use of the products in these instances could delay healing or

make your skin problems worse. After your treatment, you might have some swelling, redness, pain, bruising, and tenderness. This will normally last less than seven days. In rare circumstances, the doctor may inject into a blood vessel, which can damage the skin. Although rare, red or swollen small bumps may occur. If you have had facial cold sores before, an injection can cause another outbreak. To avoid bruising and bleeding, you should not use the products if you have recently used drugs that thin your blood or prevent clotting. If you are pregnant, breastfeeding, or under 18 years, you should not use products in the Restylane family.

Patients should be limited to 6.0 mL per treatment. The safety or effectiveness of products in the Restylane family for the treatment of anatomic regions other than nasolabial folds have not been established in controlled clinical studies.

The Restylane family of products is available only through a licensed practitioner. Complete product and safety information is available at www.RestylaneUSA.com.

*In clinical studies evaluating the Restylane family of products, Restylane-L and Perlane-L demonstrated less discomfort at injection and up to one hour later when compared to Restylane and Perlane, respectively. Restylane and Perlane are registered trademarks of HA North American Sales AB.
